DharmaScroll — Week 1 Execution Plan

Goal: ship a real, installable Flutter MVP in 7 days: the Shloka feed, Moksh Points, Gita Yatra (Chapters 1–3), Daily Sankalp, onboarding, and Mann Darpan working on a seed set of ~108 verses with local tag-matching.

Source of truth: `DharmaScroll_Product_Blueprint.pdf` (v1.0, November 2026) and `dharmascroll-site.html`.

Repo today: a Flutter starter template. ~110 lines of app code, zero dependencies, CI that builds an APK on every push to `main`. There is no product code yet.

---

1. Scope for the week

Build this week (MVP slice)

#	Feature	Definition of done
1	Design system	Blueprint palette + fonts; light and Ratri themes
2	Shloka feed	Full-screen vertical feed, one shloka per card, offline
3	Expand sheet	Shabdarth / Katha / Jeevan tabs
4	Moksh Points	Append-only ledger, caps, streak, Vishram, wallet
5	Checkpoints	Quiz/reflection card every 7 shlokas
6	Gita Yatra	18-chapter path UI, Ch 1–3 playable with quiz
7	Daily Sankalp	Create + evening check-in (done / partly / not today)
8	Mann Darpan v0	Text/voice input, local tag retrieval, lesson + 3 actions
9	Onboarding	6 screens, guest-first, deferred OTP
10	Share card	9:16 PNG with watermark + share sheet
11	Profile	Stats, badges, saved shlokas, journal, settings
12	Release build	Signed APK, green CI, v0.1.0 tag

Explicitly deferred (do not attempt this week)

Item	Why it waits	Target
All 700 verses scholar-tagged	Weeks of human review; it is the moat	Weeks 2–8
Chant/meaning audio (1,400 files)	Studio recording	Weeks 2–6
Real Sarvam STT + LLM + TTS	Python service, pgvector, ops	Week 2
Sangha leagues / Sakha / Parivar	V1.1 in blueprint	Weeks 5–6
Pro paywall / RevenueCat	Needs store accounts + products	Weeks 9–12
60 illustrations, widgets, focus lock	Art + native work	Later
Play Store / App Store launch	Review cycles, ASO	Weeks 13–16

Hard rule

Content is the bottleneck, not code. If the 108 seed verses are not ready on Day 1, the week slips. One person must own verse text + tagging.

---

2. Stack decisions (lock before Day 0)

Layer	Choice	Reason
Mobile	Flutter 3.x + Dart	Repo is already Flutter; blueprint allows it
State	Riverpod	Testable, no BuildContext coupling
Routing	go_router	Declarative, deep links for share cards
Local DB	Drift (SQLite)	Typed queries for MP ledger + verse state
Audio	just_audio	Stream + cache chant audio
Recorder	record	Mann Darpan mic input
Notifications	flutter_local_notifications	Morning + evening reminders
Share	share_plus	Share card + deep link
Backend	Supabase (week 2)	Auth, Postgres, RLS, storage
AI	Sarvam + LLM (week 2)	STT/TTS/lesson generation
Analytics	PostHog + Sentry (week 2)	Funnels, crashes

Do not switch to React Native. The blueprint names RN + Expo as one option and Flutter as an equally valid one. Switching now throws away the CI and shell already in the repo.

---

3. Branch and commit workflow

```
main                    protected; CI green; APK builds
└── feature/week-1-mvp   all week-1 work
    ├── feat/design-system
    ├── feat/shloka-feed
    ├── feat/mp-engine
    ├── feat/yatra-sankalp
    ├── feat/mann-darpan
    └── feat/onboarding-share
```

- One feature branch per day, squash-merge into `feature/week-1-mvp`.
- Commit style follows the repo: `feat:`, `fix:`, `docs:`, `ci:`, `chore:`.
- `flutter analyze` and `flutter test` must pass before every merge.
- Open a PR into `main` only on Day 7 after the release build is verified.

---

4. Day-by-day execution

Day 0 — Decisions and scaffolding (3–4 hours)

Tasks

- [ ] Confirm Flutter, seed verse set owner, and local-only backend for week 1.
- [ ] Create branch `feature/week-1-mvp`.
- [ ] Add dependencies to `pubspec.yaml`: `flutter_riverpod`, `go_router`, `drift`, `sqlite3_flutter_libs`, `path_provider`, `just_audio`, `record`, `share_plus`, `flutter_local_notifications`, `google_fonts`, `intl`, `uuid`.
- [ ] Create folder structure:

```
lib/
  main.dart
  app.dart
  core/
    router/app_router.dart
    theme/app_colors.dart
    theme/app_theme.dart
    constants/app_constants.dart
  data/
    models/verse.dart
    models/mp_event.dart
    models/sankalp.dart
    models/lesson.dart
    repositories/verse_repository.dart
    repositories/progress_repository.dart
    services/local_db.dart
  presentation/
    shell/app_shell.dart
    screens/onboarding/
    screens/feed/feed_screen.dart
    screens/feed/widgets/shloka_card.dart
    screens/feed/widgets/expand_sheet.dart
    screens/feed/widgets/checkpoint_card.dart
    screens/yatra/yatra_screen.dart
    screens/mann/mann_darpan_screen.dart
    screens/sangha/sangha_screen.dart
    screens/profile/profile_screen.dart
    widgets/
assets/
  verses/gita_seed.json
  audio/
  art/
```

- [ ] Define the `Verse` JSON schema exactly per blueprint §06:

```
{
  "id": "3.21",
  "chapter": 3,
  "number": 21,
  "yogaName": "Karma Yoga",
  "sanskrit": "...",
  "iast": "...",
  "meaningHi": "...",
  "meaningEn": "...",
  "wordMeanings": [{"word": "...", "root": "...", "meaning": "..."}],
  "speaker": "Krishna",
  "listener": "Arjuna",
  "context": "...",
  "lessonHi": "...",
  "lessonEn": "...",
  "emotionTags": ["anger", "pride"],
  "situationTags": ["work", "leadership"],
  "audioChantUrl": "",
  "illustrationId": "",
  "difficulty": 2,
  "adviceSafe": true
}
```

- [ ] Wire a 5-tab shell with a centre mic button: Shloka / Yatra / Mann / Sangha / Profile.

Acceptance: app boots into the shell, `flutter analyze` clean, `flutter test` green.

Day 1 — Design system and data layer

Tasks

- [ ] Split colours into `core/theme/app_colors.dart`:

Token	Hex	Use
Patra	`#F5ECD9`	base parchment
Bhoj	`#EAD8B3`	aged edge
Card	`#FBF6EA`	surfaces
Kesar	`#C2601C`	primary action
Sindoor	`#6E1F1A`	headings, Sanskrit
Swarna	`#B08A2E`	rewards, MP
Masi	`#2A1C11`	body text
Ratri	`#1F0F0A`	night mode

- [ ] Load fonts with `google_fonts`: Tiro Devanagari Sanskrit (shlokas), EB Garamond (translations), Inter (UI), Noto Sans Devanagari (Hindi UI).
- [ ] Build `Verse` model + `VerseRepository` that loads `assets/verses/gita_seed.json`.
- [ ] Add seed set of ~108 famous verses: 2.47, 2.48, 2.50, 2.55, 3.21, 6.5, 12.x, 18.x etc. Each fully tagged.
- [ ] Register asset in `pubspec.yaml`.

Acceptance: a debug screen lists all seeded verses with correct Devanagari rendering, light and Ratri themes both readable.

Day 2 — Shloka feed and expand sheet (core screen)

Tasks

- [ ] `FeedScreen` with vertical `PageView`, one card per shloka.
- [ ] `ShlokaCard` layers:
- quiet header: `ADHYAY {n} · {yoga} · SHLOKA {n}`
- Devanagari (largest element)
- IAST transliteration
- one-line meaning (Hindi / English / both)
- right rail: chant, save, share, MP indicator
- "Tap to go deeper" cue
- [ ] `ExpandSheet` with three tabs:
- **Shabdarth** — word-by-word + anvaya
- **Katha** — speaker, listener, scene
- **Jeevan** — 60–90 word modern lesson
- [ ] Double-tap to save with lotus-burst animation; long-press to share.
- [ ] 280 ms transition, subtle background parallax.
- [ ] Feed modes: For You / Kram (sequential, resumes) / Topics.

Acceptance: 60 fps swipe through the seed set offline; expand sheet opens and closes without layout overflow on a small phone.

Day 3 — Moksh Points engine, checkpoints, daily goal

Tasks

- [ ] Drift tables: `mp_ledger` (append-only) and `user_stats` (cache).
- [ ] Ledger columns: `id, user_id, ts, event_type, delta, ref_type, ref_id, day_bucket, idempotency_key`.
- [ ] Implement earning rules:

Action	MP	Cap/day
Read shloka (visible ≥ 6 s or audio played)	+2	20
Open expand sheet (Katha or Jeevan)	+3	10
Checkpoint correct	+5	no cap
Yatra lesson complete	+20	no cap
Perfect quiz	+10 bonus	—
Chapter complete	+100 bonus	—
Mann Darpan entry (≥ 15 s)	+15	2
Sankalp done	+25	1
Sankalp partly	+10	1
Reflection note	+8	3
Daily goal met	+15	1

- [ ] Implement protective rules: no deduction for mood; honest "not today" = 0; points never below level floor; speed-scroll (5 cards < 2 s) pauses feed points for 10 min.
- [ ] Checkpoint card every 7 cards: quiz + reflection note.
- [ ] Streak + Vishram: 2 free rest days/month, +1 per 7-day streak, max 5 banked.
- [ ] "Nitya Path complete" reward sheet with itemised MP.
- [ ] MP wallet/ledger screen with rules link.

Acceptance: unit tests prove caps, idempotency, and that a sad mood never loses points.

Day 4 — Gita Yatra and Daily Sankalp

Tasks

- [ ] `YatraScreen`: 18 chapters as a winding path; Ch 1–3 unlocked, rest locked.
- [ ] Lesson player: 5 shlokas + quiz + chapter summary.
- [ ] `Sankalp` model and create flow from a verse's Jeevan line.
- [ ] Evening check-in: done / partly / not today (honest "not today" = 0 MP).
- [ ] Local notifications: morning shloka at user time, evening check-in; max 2/day; never 10 pm–7 am.

Acceptance: complete Ch 1 Lesson 1 end-to-end; create a Sankalp; check in; notifications fire in a device test.

Day 5 — Mann Darpan v0

Tasks

- [ ] Input screen: hold-to-talk mic + text fallback; max 2 min; privacy line ("audio deleted after transcription").
- [ ] Local retrieval v0: 1. Normalise text, extract emotion + situation keywords. 2. Score seed verses: `0.5 × tag overlap + 0.4 × keyword similarity + 0.1 × freshness`. 3. Return top 3.

- [ ] Result screen: primary shloka + chant, 2-sentence "why this shloka", Jeevan Path (3 actions), Sankalp button, "Show another shloka".
- [ ] Crisis gate: keywords for self-harm/abuse → crisis screen with Tele-MANAS 14416 and 112; no lesson, no points.
- [ ] Persist entry to private journal.

Acceptance: 10 test inputs return a relevant verse; crisis input always bypasses the normal path.

Note: this is deliberately local retrieval, mirroring the blueprint's "retrieval before generation". The real Sarvam/LLM pipeline is week 2.

Day 6 — Onboarding, auth, share cards

Tasks

- [ ] Onboarding: Splash → Language → Intent → Daily goal/reminder → guest feed → deferred OTP after 5 cards or first save.
- [ ] Supabase schema (optional this week): `users`, `user_verse_state`, `sankalps`, `mann_entries`; RLS on.
- [ ] Share card: `RepaintBoundary` → 9:16 PNG, parchment/Madhubani/Ratri variants, watermark + deep link, share via `share_plus`.
- [ ] Coach marks on the first real card (4 gestures).

Acceptance: install → first shloka in under 30 s; save triggers sign-up; share card renders correctly on Instagram Story dimensions.

Day 7 — Polish, test, build, release

Tasks

- [ ] Profile screen: stats, badges, saved shlokas, journal, mood trend, settings/language.
- [ ] Accessibility: text size to 200%, Sanskrit never below 20 pt, contrast ≥ 7:1.
- [ ] Tests: MP rules, feed pagination, checkpoint insert, Mann Darpan retrieval, crisis gate.
- [ ] `flutter analyze` and `flutter test` clean.
- [ ] Release keystore + `flutter build appbundle` (Play) and `flutter build apk --split-per-abi`.
- [ ] Tag `v0.1.0`, push, verify CI artifact.
- [ ] Open PR `feature/week-1-mvp` → `main`.

Acceptance: signed release APK installs on a physical Android device; CI green; PR merged.

---

5. Definition of done (week 1)

- [ ] App installs from a release APK on a real device.
- [ ] Onboarding → first shloka under 30 seconds.
- [ ] Feed swipes smoothly through 108 verses offline.
- [ ] Expand sheet, save, share all work.

- [ ] MP ledger is auditable and caps are enforced.
- [ ] Checkpoints appear every 7 cards.
- [ ] Yatra Ch 1–3 playable with quiz and completion.
- [ ] Sankalp create + evening check-in works.
- [ ] Mann Darpan returns a relevant verse for 10 test inputs.
- [ ] Crisis path shows Tele-MANAS and awards no points.
- [ ] `flutter analyze` and `flutter test` pass.
- [ ] `v0.1.0` tag exists with a downloadable APK artifact.

---

6. Risks and mitigations

Risk	Likelihood	Mitigation
Seed content not ready on Day 1	High	Start with 27 verses (Ch 2, 3, 6, 12) and expand; content owner assigned Day 0
Scope creep into AI/backend	High	Local retrieval only this week; AI is a separate week-2 branch
Devanagari rendering issues	Medium	Test on Android early; bundle a font instead of relying on google_fonts if needed
MP rules feel punitive	Medium	No mood deductions; honest check-in = 0; unit tests encode the rule
Android build/CI breaks	Medium	Keep `analyze` + `test` green daily; build APK on Day 2 and Day 7
Time lost on auth/backend	Medium	Guest mode first; Supabase is optional until Day 6

---

7. Week 2 preview (out of scope for this plan)

- Python FastAPI Mann Darpan service: Sarvam Saaras STT → safety/tagging → pgvector retrieval → LLM lesson → verification → Bulbul TTS.
- Supabase production schema, RLS, server-authoritative MP validation.
- Content pipeline: scholar review, 700 verses, audio recording, artwork commissioning.
- PostHog funnels + Sentry.
- Sangha leagues and Sakha pairing.

Prepared for the DharmaScroll team. This plan is a companion to `DharmaScroll_Product_Blueprint.pdf` and does not replace it.
